

# How to restrict visibility of companies?

It's possible to differentiate access to CRM companies. Let's say that Sale Manager should see only his/her companies and not others.

There are steps to make such settings.

1. In CRM Administration, tab Companies create a new company attribute with **JIRA user** (or **JIRA Group**) type, for example an attribute "Sales Manager". See more: [Set up Companies Directory#5.4.2.1SetupCompaniesDirectory-SetupCompanyAttributes](#)
2. Restrict CRM permissions depending on that attribute. See there: [Setting up Access to Objects](#)
3. Open a Company card and set the attribute "Sales Manager" with needed JIRA user/users (group/groups).
