

Werewolf for Confluence

Werewolf for Confluence is a common plugin. So it could be installed like the other plugin through Universal Plugin Manager.

To install the plugin you need to login to Confluence as an administrator, and in the Administration\ Add-ons\ Manage Add-ons find our plugin by name: Werewolf for Confluence and install it.

The screenshot shows the Confluence administration interface. In the top right, the 'Add-ons' menu item is highlighted. The main content area is titled 'Manage add-ons'. A search bar contains the text 'werewolf'. Below the search bar, there is a dropdown menu for 'User-installed'. The 'User-installed add-ons' section shows a list of add-ons. The 'Werewolf for Confluence' add-on is highlighted, showing its details: Version: 1.0, Vendor: Teamlead, Add-on key: ru.teamlead.confluence.plugins.werewolf-for-confluence, License details: 10-user testing license, Standard, expires Apr 15, 2016, License status: Valid, License SEN: Unknown, License key: AAABCQ00DA... The 'Configure' button is highlighted.

After installing the plugin through UPM click the Configure button and specify a groups of users that will be able to work by other user's profile.

The screenshot shows the Confluence administration interface. In the top right, the 'Werewolf' menu item is highlighted. The main content area is titled 'Werewolf'. Below the title, there is a section 'Choose groups'. A search bar contains the text 'confluence-administrators'. Below the search bar, there is a list of groups: 'confluence-administrators' and 'confluence-users'. The 'Save' button is highlighted.

Then you can choose user by clicking Menu/ Werewolf and see this user's Confluence without entering Login neither Password.
