

Project Calendar Tab

 Only server versions

On the **Project Calendar Tab** you can see all the issues of the current project and you can schedule them here.

The screenshot shows the Teamlead web application interface. At the top, there is a navigation bar with a hamburger menu icon, the 'teamlead' logo, and several tabs: 'Dashboards', 'Projects' (highlighted with a red box), 'Issues', 'Capture', 'Service Desk', and 'Agile'. On the left side, there is a sidebar with various icons. One icon, representing a gear or settings, is highlighted with a red box. A dropdown menu is open from this icon, showing 'ADD-ONS' with two options: 'Calendar' (highlighted with a red box) and 'CRM'. The main content area displays 'Reports: Control Chart'. Below this, there is a section titled 'How to read this chart' with a question mark icon, explaining that it shows the cycle time for the product, version, or sprint. There are two buttons: 'Learn more' and 'Hide this information'. Below the chart section, there is a 'Control Chart' for the period 'July 25 2014 to April 9 2015 (All Time)'. At the bottom of the chart, there are statistics: '1w 1d 9h average', '1d 4h median', '< 1m min time', '68w 3d 19h max time', and '115 issues'.

Also you can define working hours of the project here. This will affect the display custom work hours and weekends in the calendar.

 So, these settings will apply to the **Issue Calendar Tab** (see additional information below).

On the **edit settings of project calendar screen** you can specify:

- output data (based on the project, favorites filters or JQL-query)
- working time
- weekend showing
- need taskbar
- need to display the unscheduled tasks
- ability to display modes: Month, Week, Day
- set the default display mode
- ability to show the avatar and username on issues panels calendar
