

Custom Field - Issue Picker

You can select one or more issues that satisfy some JQL to be displayed in Issues screens.

The screenshot shows the JIRA Administration interface. The 'Administration' tab is selected, and the 'Issues' sub-tab is active. The 'Custom fields' section is highlighted in the left sidebar. A modal window titled 'Select a Field Type' is open, showing various field types. The 'All' filter is selected, and the 'Issues picker' field type is highlighted. The 'Add Custom Field' button is visible in the top right corner of the 'Custom fields' section.

Setting	Description
Custom field	This field should be the same in current issue and in searched issues.
Filled with options by default	if checked, all the found issues (limited by JQL and custom field) will be added to the field "Issue Picker".
Related custom field	Choose a field from dropdown list to show it's value right after issue key and summary.
JQL	JQL to limit issue list.

Then you can use a new JQL-operator for search issues that are selected in this Issue Picker field of other issues, like:

id in MentionedIn("Deals", "project = CRM")

"Deals" - is a name of IssuePicker field

"project = CRM" - additional JQL filter to the parent issue

So it means - find the issues, that are selected in a field "Deals" of issues of project "CRM".

How it looks in Issue screen:
