

# Transactions Total Issue Fields

This feature allows you to place as many [Automatic Amount Custom fields](#) as you need. First create Custom fields and add them to screens where you need them to be filled in automatically with transactions sums according to set conditions.

After that go to CRM Admin Menu/Transactions:

And find Transactions Total Issue Fields section:

Transactions Total Issue Fields		
Custom Field	Filter	
<div>Amount</div>	<div></div>	<div>Add</div>
Sale Sum	Direction = Income	<div>Delete</div>
Total sum		<div>Delete</div>
Total Income Plan	Direction = Income AND Status = Plan	<div>Delete</div>

As conditions use formula: [Transaction Attribute](#) = Attribute Value

For example:

Condition	Result
Direction = Income	Sum of all incoming transactions in issue
Direction = Expense AND Status = Fact	Sum of expenses with only 'Fact' status
Empty	Sum of all transactions in issue

To recalculate Total issue fields use "Totals recalculation" button. The feature allows to recalculate all total fields in issues if there are some changes of formulas.

For example you as an administrator edit the filters and then click on "Totals recalculation".
