

# Setting Up Custom Company Directories

Custom company directories settings allow administrators create separate companies directories with their own permissions.

Go to CRM administrator menu / Custom company directories and create new directories:

Administration

Search JIRA admin

The process is the same as for creation of new [Custom Directories](#). First create Tabs in the table above then create new fields of needed types. Don't forget to add the fields to the tabs. To set the order of the fields in the tabs in the table above select the tab and click on "Fields" button and drag'n'drop the fields in the order you want.

When new fields and tabs are created you can set the permissions to the custom company directory. To do that click on "Permissions" button:

Permissions	
Permission	Groups
Remove	 jira-administrators
View	 jira-administrators  jira-users
Edit	 jira-administrators
Add record	 jira-administrators  jira-users
<div>Close</div>	

Add Jira-groups for the permissions:

Permission	Description
Remove	Permission to remove records from directory
View	Permission to view the directory page. <div>  Notice that if the user is not the member of any of listed groups, this user will see standard Company directory (if has access to that). If the user has permission to view at least one Custom company directory then the standard Company directory will be hidden and the user will see only Custom company directory that he/sha has access to.           </div>
Edit	Permission to edit records in the directory
Add record	Permission to add new records

To use these directories inside Jira issue you have to [create custom field](#).
