Along with issues a calendar can contain other kinds of entities.

Events

An event exists only in a calendar it was created. It can be added to a calendar by any calendar user in a similar way as creating a new issue.

An event has a limited number of parameters:

1. Name. You can change it after the creation.
2. Background and text color.
3. Schedule.

New event

Name

Color

Schedule

Daily ⌄

Ends on

8/3/2021 🗓

Save **Close**

ⓘ Once you've created an event you can change its name, color, and end date, however, it is impossible to reschedule already created events. You have to delete the incorrect one and create a new one.

Google-Events

Those are events automatically displayed if a Google calendar is connected to a current calendar.
