

# Create issue from comment

Quick way to create a issue based on comment text.

To make this option available:

1. Turn on Toggle Create issue from comment;
2. Choose Issue type link for issue

The screenshot shows the Jira Administration interface. The 'Administration' tab is selected in the top navigation bar. In the left sidebar, the 'Related Issue' option is highlighted. The main content area is titled 'Related issue link types choice'. It features a table with columns for JQL, Project, Issue type, and Link type. The first row shows a JQL filter 'project = demo', Project 'MeinKanbanen', Issue type 'Task', and Link type 'clones'. The second row shows 'project = TEST', Project 'Development', Issue type 'Story', and Link type 'clones'. Below the table, there is a section 'Fields to copy from the parent issue' with a 'Field' dropdown and an 'Add' button. At the bottom, the 'Create issue from comment' toggle is checked, and the 'Issue type link for issue created from comment' dropdown is visible.

After enabling this option, the comment appears plus 

The screenshot shows a Jira issue page. The 'Comments' tab is selected. A new comment has been added by 'Helen Lambert' 12 minutes ago. The comment text reads: 'In issue navigator we are able to see CRM contact but when we open that ticket, it's respective value is not visible on view screen. It blinks for 1 second and automatically disappear, please check attachment for more clarification.' The page also shows a 'Description' section with a warning message, an 'Attachments' section with a 'Drop files to attach, or browse.' button, and a 'My reminders' section with buttons for 'Reminder', 'Tonight', 'Tomorrow', 'In a week', and 'In month'.
